SHUTTERING CLAMP

Shuttering clamps are a type of adjustable formwork clamps. It is used for to fix concrete formwork columns as well as columns. You can use the adjustable shuttering clamps to fix different sizes of the formwork columns. Thus, the shuttering clamps are also called formwork rapid clamps.

NMTC formwork shuttering clamps are manufactured from high-strength mild steel plates according to BS EN standards. Only certified quality of mild steel round bars and TMT bars are used for these clamps. All the clamps are hot-forged to ensure zero breakage & loss during application. With these shuttering clamps, there is no need of screwing, nailing, bolting, or drilling to construct scaffolding at construction site. Based on the application, shuttering clamps can also be modified in terms of size, length and finish.

ADVANTAGES

- Corrosion resistant surface
- Can withstand high load
- Robust in construction
- Available in varied shapes and sizes
- Longer life span
- Easy installation
- Dimensionally accurate
- Precise structure
- Manufactured from certified grade steel
- In compliance with industrial standards and norms
- Compatible with all type of scaffoldings

TECHNICAL SPECIFICATION:

Thickness	3.5mm – 8mm
Width	20mm – 40mm
Long	60cm – 180cm
Hook	16mm – 22mm Type: square/round/deformed
Bend	L Bend - 90° (+ - 2%)
Finish	Self/Black Paint
Packaging	Standard 10 to 25 Pcs Bundle
Load Capacity	90 to 125 K.N.
Material Used	Low Carbon Mild Steel / Cast Iron
Comply To	BS EN Standards
Compatible	Compatible with all type of scaffoldings
